At a glance

5.11 million t Total fish production, 2024-25	**60.8%** Farmed (culture) share, 2024-25	**11.1%** Marine share, 2024-25	**6.8×** Growth since 1983-84

Fish production by source, 1983-84 to 2024-25 (metric tonnes)

Values for every year are in Table 1.

How to read this volume

- All production figures are in **metric tonnes (t)**. Years are Bangladesh fiscal years (July–June); 2024-25 = July 2024 to June 2025.
- **Inland** = freshwater and brackish-water fisheries. **Capture** = wild catch (rivers, Sundarbans, beels, Kaptai Lake, floodplains). **Culture** = farmed fish (ponds, seasonal culture waterbodies, baors, shrimp farms, crab, pen and cage).
- A dash (–) means the figure was not reported separately for that year. It is **not** zero.
- Short notes under each table explain the places where numbers are not directly comparable over time.

[a] 2004-05: floodplain catch rose and pond production fell; the yearbook attributes this to the 2004 flood.

[b] Seasonal culture waterbodies (paddy fields, borrow pits, etc. under culture) were counted as floodplain *capture* until 2004-05. From 2005-06 this table uses the Department of Fisheries' revised series, which counts them as *culture* (the original yearbooks of 2005-06 to 2008-09 still counted them as capture). The capture/culture split before and after 2005-06 is therefore not fully comparable; the total is not affected.

[c] 2011-12: pond and seasonal-culture figures as revised in later yearbooks (pond 1,392,412 t instead of 1,342,282 t first published; total unchanged).

Seasonal culture waterbody shown from 2005-06 (see Table 1, note b). Pen and cage culture are reported from 2013-14 and crab from 2015-16; before that they were not counted. 2016-17: the river figure jumps mainly because of higher reported hilsa catch. 2024-25: marine figures come from an updated data source (marine artisanal −12%).

In 2002-03 the river area included the Sundarbans; river (853,863 ha) + Sundarbans (177,700 ha) in later years equals the 2002-03 river area. In 2002-03 floodplain area included seasonal culture waterbodies.

Areas of rivers, beels and Kaptai Lake are fixed values from surveys made in the 1980s, so per-hectare figures for wild catch change only because reported catch changes. Part of beel production is from stocked fingerlings ("beel nursery").

Notes and sources

Things to keep in mind

- Numbers are reproduced as printed by the Department of Fisheries. Every table was checked against the totals printed in the yearbooks; the few places where the yearbooks themselves do not add up are noted under the tables.
- Some year-to-year changes come from changes in how fish are grouped or counted, not from real change: the capture/culture reclassification of seasonal culture waterbodies, the 2004-05 flood year, new species groups from 2013-14 onward, the hilsa-driven river jump in 2016-17, and an updated marine data source in 2024-25.
- Recent yearbooks report small native fish (punti, tengra, mola, chapila, kachki, etc.) only inside "Other inland fish"; Kaptai Lake species detail ends in 2010-11.
- 1983-84 to 1992-93 figures come from the 30-year table in the 2012-13 yearbook; 1993-94 to 2001-02 from the 2002-03 yearbook.

For original category names, source table numbers for every figure, both original and revised figures, species-by-waterbody tables, beel and Kaptai species detail, and the full list of 56 data notes, see **Volume 2: Detailed Data Files** (CSV and Excel).
